Winemaking:

After arriving at the winery, the grapes are de-stemmed, crushed and then the must is brought to a temperature of 20-22° C. Alcoholic fermentation now starts and selected yeasts are added. The fermentation process is carried out at a temperature of 24-28° C. During the first three days of fermentation 4 brief daily top ups are done and then 2 long daily top ups for the following 5-9 days of fermentation, this dependent on the quality of the harvest. After the grapes have been racked and softly pressed, the wine is decanted at a temperature of 22-24°C this favouring the malolactic fermentation. As soon as this phase is concluded, the wine is poured into stainless steel tanks and is refined and perfected during the following 4-8 months.

Storage and ageing:

Must be stored in a cool dry cellar, preferably in the dark, in order to preserve its smell and taste characteristics. This important red Sicilian wine should not be exposed to sudden temperature changes and the cellar light should be not intense. The ideal temperature for conservation should be between 12°C and 16°C.

beautiful ruby red with light garnet hues.

Bouquet:

Ethereal, warm, with delicate notes of red berries, reminiscent of blueberry and cherry, followed by a spicy, balsamic note and in the end vanilla notes.
